

“Device for the obtention of printing of edentulous ridges in one take”

MX/a/2024/007955

Technology description

A pair of dental print holders (upper and inferior) for edentulous patients, that allow to obtain a precise printing of the maxillae and adjacent gingival areas. The print holders have good endurance and stability in their structure, wich allows them to be washable, sterile, and reusable by the odontologist.
